

Attachments for Reach Trucks

Reach Truck Attachments - Reach trucks are loading machines used by types of companies that keep up a storeroom facility or distribution center concerning the organization of finished goods and equipment on pallets which are inserted into high shelving units. This device provides straightforward and reliable retrieval of the loaded pallets whilst ensuring proficient storage of cargo that are not required immediately.

Normal reach vehicles are built with a mounted rigging mechanism on the face of the vehicle. Telescoping forks are able to move up and down on this mounted rigging. A system utilizing hydraulics allows the operator grab and even reposition the load over the outriggers. This design delivers a more even balance of the load and will allow for simpler maneuvering between the warehouse shelves and small aisles.

When loading pallets on their specific shelves, the hydraulics can be used to slide and swing the pallet into position. This tool is small enough to fit into an aisle less than 10 feet across without many difficulties provided there is nothing protruding from any shelves.

There are several different designs of reach truck on the market. The simplest unit is a stand up model that you can slide the forks under the pallet and then transport it to another site for storage, then slide it into place. Normally this style of reach truck is beneficial for shelving units that are only one pallet deep. A double-reach vehicle works in the same basic manner as the stand-up type however uses telescopic forks that are lengthy enough to slide a pallet into shelves that accommodate two pallets. Straddle reaches are a different reach truck variation. This mode of reach truck slides beneath the pallet and is also able to seize the sides as well. The straddle reach unit is advantageous when grasping the sides of the pallet and cargo will not result in damage. They allow easy pallet retrieval of a pallet that may be 4th or 5th in line and are helpful when the shelving units are easily reached in more than one direction.

Manufacturing plants, warehouses and even fabric companies normally utilize one or more types of reach truck. They can be used to stock pallets of finished commodities, storing provisions, materials, equipment, and to maintain the upkeep of storage units is familiar practice. Reach trucks are incredibly easy machines to operate to help make good use of your time and current storeroom space.
