

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are used on lift masts so as to help them operate within challenging environmental surroundings. Lift masts are normally subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences like for instance cold, heat, dust, contamination, aggressive ambient air and moisture. Thus, the guidance arrangements of lift masts need to be particularly strong and have a particular high load carrying capability.

In order to help compete in many various environmental surroundings, carriage rollers were designed for a lot of lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
