

Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually a tool made out of top quality materials intended to withstand the most challenging operations and work environments. This piece of equipment enables the person driving to control the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate carrying and position in a quicker and more effective method.

The only one of its kind blade pocket design can enable operators to safely swing the unit's blades without any worry of destroying the positioning cylinders. This could allow the operator the alternative to either perform simultaneous or independent blade movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into fork positioners on existing units.
